

Howell's montia Research Project 2008
 Hwy 36 Frontage Road L47
 Occurrence 156 and 236
 T1N, R2E, Sections 5 and 6

This road section and its associated occurrences are not included in either the research project or the open roads monitoring. This road was covered in a slide in 2007 and was cleared and graded. HRC botany staff visited the site in 2008 for post impact assessment of the *Montia howellii* population here and found the plants had spread from the original occupied area. This site is included as additional evidence of this species reaction to disturbance.
